

# Xkyte Fund

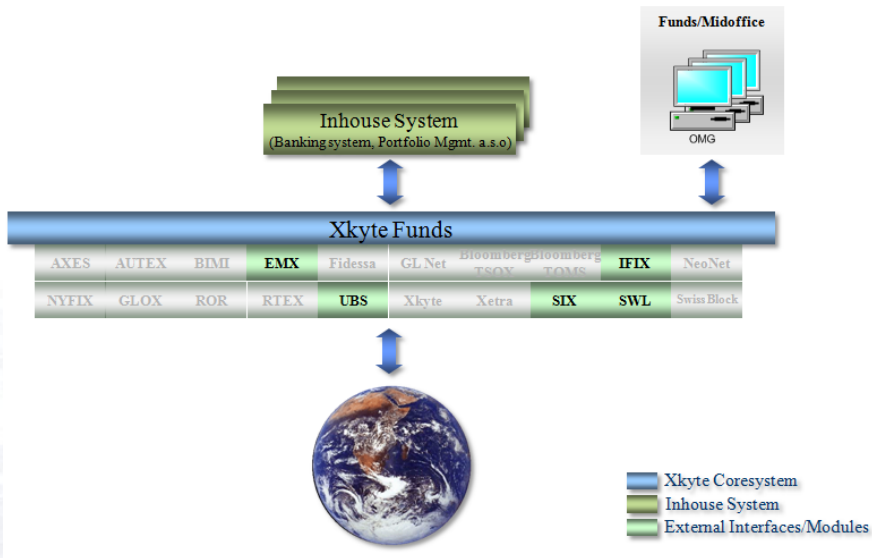

## Portrait

In 1994 **OARIS** started with the development of qualitative high-standing software for the financial sector. Thanks to long lasting experience from the financial industry among our employees **OARIS** was from the beginning significantly involved in the Project “Elektronische Börse Schweiz (EBS)” – “Electronic Stock Market Switzerland” with implementations and connections in particular banks. In 1996 the first bank started with the **OARIS** Order Routing System (ORS) at the Swiss Stock Exchange SWX. Today a multiplicity of banks is using products from **OARIS**.

**OARIS** is offering software solutions for banks in the area of security transactions. The array of products goes from the simple parametrizable FIX Order Routing solution **Xkyte FIXBox**, over the high-performance trading system **Xkyte Trading**, the user-supported fund routing system **Xkyte Fund** to the flexible **Xkyte** Order Management System **Xkyte OMS**. The **OARIS** modular technique enables shortly implementation of customer-requested solutions.

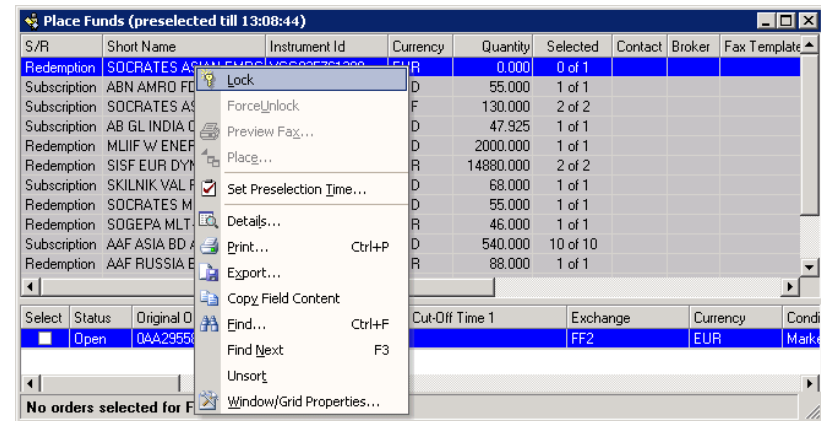

**Xkyte Fund** allows the electronic forwarding of orders as well as the manual processing if there is no direct interface. The user has at his disposal multiple support functions as e.g. the cutoff engine.

**Xkyte Fund** knows the order pooling. Such grouped orders can be transmitted either electronically or manually. The pooling is effected either manually or automatically by means of preselection or cut-off time.

The history of all transactions is electronically recorded by **Xkyte Fund**. **Xkyte Fund** GUI permits the online access to all data at any time. By configuration of rules the system is able to detect wrong prices and to stop the respective processing. The user is able to correct the execution data already in **Xkyte Fund**.

The graphical user interface of **Xkyte Fund** optimally supports the user. Different colors draw the user's attention to the upcoming order processing.
