

# Xkyte Trading

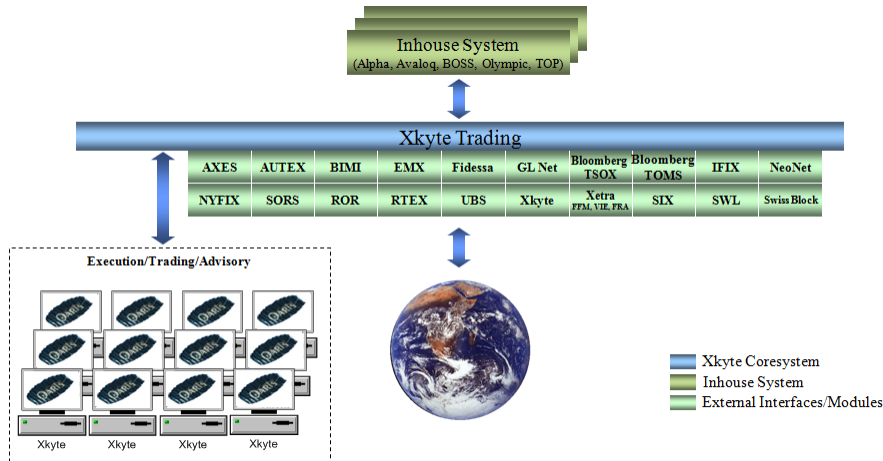

## Portrait

In 1994 **OARIS** started with the development of qualitative high-standing software for the financial sector. Thanks to long lasting experience from the financial industry among our employees **OARIS** was from the beginning significantly involved in the Project “Elektronische Börse Schweiz (EBS)” – “Electronic Stock Market Switzerland” with implementations and connections in particular banks. In 1996 the first bank started with the **OARIS** Order Routing System (ORS) at the Swiss Stock Exchange SWX. Today a multiplicity of banks is using products from **OARIS**.

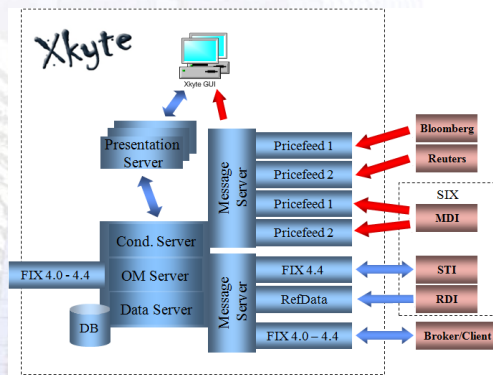

**OARIS** is offering software solutions for banks in the area of security transactions. The array of products goes from the simple parametrizable FIX Order Routing solution **Xkyte FIXBox**, over the high-performance trading system **Xkyte Trading**, the user-supported fund routing system **Xkyte Fund** to the flexible **Xkyte** Order Management System **Xkyte OMS**. The **OARIS** modular technique enables shortly implementation of customer-requested solutions.

**Xkyte Trading** is a trading system developed on the basis of the newest technology. **Xkyte Trading** connects to various stock exchanges. The modern and highly configurable graphical user interface meets future requirements already today.

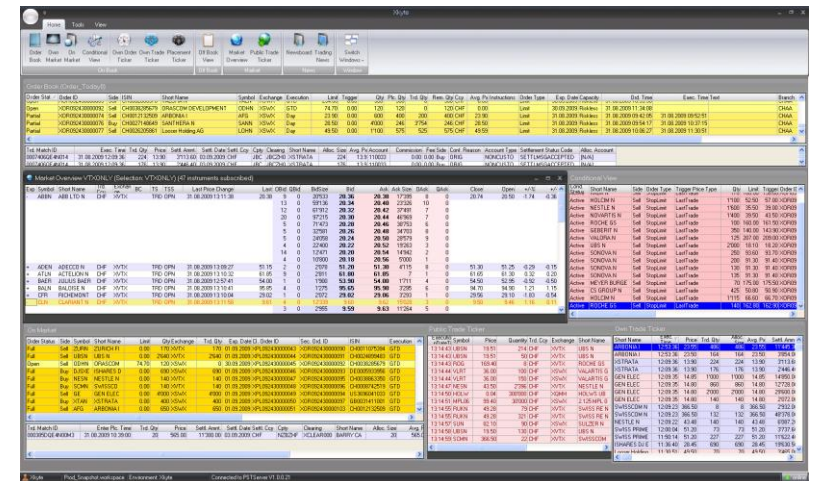

The architecture of **Xkyte Trading** allows the connection to different price feeds. It is possible to integrate missing information from various financial information systems.

The graphical user interface of **Xkyte Trading** offers a high-end trading platform. In order to meet the individual user requirements we have developed a highly parameter-driven interface. All functions can be allocated to the user. By that means the graphic view is totally transparent and can be distributed to several authorized user(groups) without any risks.

**Xkyte Trading** permits the connection to multiple entry and target systems. There are not only possible direct connections to stock exchanges (DMA) but also connections to FIX networks and to individual FIX brokers.

In order to control the report flows **Xkyte Trading** is equipped with an integrated rules engine allowing to set rules for the control of the report flow according to the criteria. All fields of a message can be used as criteria.
